Dear Sirs:

This submission is in response to your request for artist proposals for Quigg Newton Auditorium/Ellie Caulkins Opera House.

#### MICROVISIONS: THE ART OF INNER SPACE

A few centuries ago, the arts and sciences were viewed and practiced as natural partners in creative and cultural development. Today our world is divided into the factual (i.e. words and numbers) and the emotional (images and feelings.)

As a scientist and an artist, (white-Caucasian) it is my goal to re-unite the arts and sciences; and to encourage development of imagination, creativity and individual growth.

I am an artistic voyager who has explored the mystery of Inner Space and returned with pictures of its natural breath-taking beauty. My shuttle is a microscope with built-in camera using 4"x5" professional film to record these natural designs.

These molecular microstructures, with variety, beauty, form, and color, are both dramatic and mysterious. This '*discovered art*' exists everywhere, to be found within materials we commonly hold in our fingertips. For example, crystals, rocks and minerals, chemicals, fibers, plastics, vitamins, metals, biological, and pharmaceutical compounds. Each art image possesses a uniqueness of color and microstructure—a deeper meaning and visual experience than with our five senses alone.

These fractal images inspire the viewer in new emotional directions. They catalyze the learning process. Origin of this art is in the world of our Creator. I am looking at a 'canvas of life'! These images are the '*FINGER PRINT OF GOD*'! Internal structure and inherent color are key elements of this art. Individuals relate to these MICROVISIONS in a personal way, connected to their own life. A new freedom in art interpretation has resulted.

Business/Cultural programs of the City of Denver could pioneer awareness and public funding using these MICROVISIONS images concepts.
